EDUCATION

Parul University

Vadodara, Gujarat, India

Bachelor of Technology in Computer Science and Engineering; GPA: 8.26/10.0

Aug 2023 – Aug 2027

- Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Software Engineering, Object-Oriented Programming.

Kathmandu Model Secondary School

Kathmandu, Nepal

High School (Science Stream)

Jun 2019 – Aug 2021

EXPERIENCE

Google Summer of Code 2026 Contributor | 🔗 [Project Link](#)

May 2026 – Nov 2026

ML4Sci (Machine Learning for Science)

Remote

- Built an end-to-end ML pipeline to denoise ALMA/VLT observations of protoplanetary disks for the EXXA project, under mentorship of researchers from University of Alabama and Oxford University.
- Benchmarked classical and neural denoising architectures (Autoencoder, VAE, U-Net, Diffusion Model), achieving Structural Similarity Index of 0.81 with a full-image U-Net approach.
- Designed scalable data ingestion pipeline for spectral cube data (FITS format) with statistically-weighted sampling and leakage-free train/validation splitting; released fully reproducible public pipeline.

Web Development Intern

Nov 2025 – Dec 2025

InnoByte Services

New Delhi, India (Remote)

- Designed and developed a full-stack web application for hotel booking with modern UI/UX architecture, RESTful API integration, and responsive frontend.
- Delivered a production-ready system following SDLC practices, collaborating with a team on both front-end and back-end components.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript.

Frameworks & Libraries: React, Node.js, Express.js, NestJS, Tailwind CSS.

Databases: PostgreSQL, MySQL.

Tools & Technologies: Git, GitHub, CI/CD, REST APIs, JWT Authentication, Swagger, TypeORM, Prisma, Postman.

AI/ML: PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, OpenCV, U-Net, VAE, DDPM, CNN, Computer Vision, Deep Learning, Machine Learning.

Core Competencies: Full-Stack Development, REST API Design, SDLC, Agile/Scrum, OOP.

PROJECTS

🌐 SU-Curries – Full Stack Restaurant Management System

React, TypeScript, NestJS, PostgreSQL

- Engineered a production-style enterprise full-stack system for restaurant operations with multi-role architecture supporting Customer, Admin, and Driver interfaces.
- Designed 25+ RESTful APIs using NestJS with TypeORM, JWT-based role-based access control (RBAC), and Swagger documentation following enterprise API design standards.
- Designed normalized PostgreSQL schema with migration scripts; built React analytics dashboards and real-time order tracking interfaces using TypeScript.

🌐 CoastSense – Social Media Hazard Monitoring Platform

Python, JavaScript, Leaflet.js

- Built a data-driven hazard monitoring platform during a national hackathon with INCOIS, integrating a Reddit scraping pipeline for real-time environmental risk analysis.
- Developed interactive geospatial visualization using Leaflet.js with crowdsourced HTML5 geolocation integration for large-scale environmental monitoring.

🌐 DeepSceneLoc – AI-Based Scene Understanding and Localization *Python, PyTorch, Computer Vision*

- Developed a deep learning prototype for scene recognition and spatial localization using PyTorch and OpenCV with custom preprocessing and feature extraction pipelines.
- Experimented with multiple CNN architectures for scene classification and spatial awareness, demonstrating strong applied ML engineering skills.

CERTIFICATIONS & TRAINING

BITATHON SAS  Credential	Mar 2026
Salesforce Administrator and App Builder Simplilearn  Credential	Oct 2025
Salesforce Certified Administrator Simplilearn  Credential	Oct 2025
Data Science with Python Coders Ready  Credential	Nov 2023

ACHIEVEMENTS & INVOLVEMENT

Google Summer of Code 2026: Selected as a GSoC contributor with ML4Sci to work on the EXXA project under mentorship from University of Alabama and Oxford University researchers, demonstrating ability to contribute to large-scale international software projects.

Open Source Contributor: Contributed to EXXA (ML4Sci), DWiM (ALASKA), DREAMS (ALASKA), and SchemaLabz OpenCouncil; maintain public repositories showcasing enterprise full-stack systems, data pipelines, and ML projects.

Hackathon Participant: Built CoastSense for INCOIS national hackathon, delivering a full working prototype under time constraints demonstrating strong problem-solving and rapid development skills.

Technical Problem Solver: Built 4+ production-ready applications spanning enterprise web (REST APIs, RBAC, PostgreSQL), full-stack (MERN), and ML systems, demonstrating proficiency across the software engineering stack.
